

Are your servers getting out of control?

Maximize Your Business with Virtualization and Server Management Technologies

Managing IT systems can be time consuming and costly. Making your existing hardware do all that your business needs it to do can put a strain on existing resources and result in system slow-downs. You need tools to help you maximize the value of your physical servers, streamline processes, and save money. You also need peace of mind that your systems are up and running, costly downtime is minimized, and your sensitive data is protected. Enter: The Go2IT Group - Microsoft virtualization and server management solutions.

The Value of Microsoft® Virtualization and Server Management Solutions

Get started with the benefits provided by the Windows Server® 2008 R2 family and System Center management technologies.

1. Consolidate server resources to reduce complexity and improve overall server utilization.
2. Optimize IT productivity with the ability to manage your heterogeneous IT infrastructure through a single management console.
3. Reduce IT costs and risks by implementing easy-to-use solutions that keep your systems functioning properly and help keep sensitive data safe from threats.
4. Lower your total cost of ownership by reducing hardware requirements, as well as lowering power and cooling costs.
5. Increase reliability through interoperable solutions.
6. Provide secure remote access to applications or full desktop to mobile users.

Even if you only have a few servers, implementing Microsoft virtualization and management solutions can make a difference, helping lower administration costs and reduce server downtime. These solutions also make it easy for you to scale when you need to so that your IT always matches the needs of your business.

About The Go2IT Group

Choosing the right virtualization and management solution for your business is too important to leave to chance. The Go2IT Group is a Microsoft certified partner with experience helping companies like yours select and implement virtualization and management solutions to help your business succeed.

Get Started Now!

Server Virtualization, Desktop Virtualization, Network Virtualization or Storage Virtualization; The Go2IT Group will determine the solution that best fits your needs and assemble a technology roadmap that delivers on time and on budget.

“To expand our services before, we would’ve spent a lot of time planning and budgeting for hardware. But implementing Hyper-V™ gave us a shortcut, and we expanded exponentially in six months.”

Mark Blake
Information Services Manager
St Leonard’s College

Selecting the best Virtualization and Management Solutions for Your Business

Do you have different operating systems in addition to Windows in your data center? Are you running servers that need upgrading to meet business needs? Do you use an IT management solution to manage IT infrastructure? Use the chart below to evaluate your IT infrastructure and choose the right virtualization and management solutions for your business.

Use the following table for more information about Windows Server and System Center technologies.

Microsoft Products or Technologies	Key Benefits	No. of Users Supported
Windows Server® 2008 R2 Data Center	Advanced server operating system optimized for enterprises requiring the highest levels of virtualization, scalability, and reliability, enabling critical solutions for databases, ERP, high volume real-time transaction processing, and server consolidation.	Unlimited users
Windows Server® 2008 R2 Enterprise	Advanced server operating system with built in virtualization capabilities and high availability for increased business agility.	Unlimited users
Windows Server® 2008 R2 Standard	Advanced server operating system with built in virtualization capabilities for increased reliability and security.	Unlimited users
Microsoft Hyper-V™ Server 2008	A simplified, reliable, and optimized virtualization solution that enables improved server utilization and reduced costs. Hyper-V is both a stand-alone product and is included with Windows Server Standard, Enterprise, and Datacenter. As a dedicated stand-alone product, it contains only the Windows Hypervisor, Windows Server driver model, and virtualization components, providing a small footprint and minimal overhead.	Unlimited users
Remote Desktop Services or Terminal Services	A centralized application deployment and remote access solution that utilizes presentation virtualization, which separates where the application is used from where it is run, to help accelerate application deployments, improve remote worker efficiency, and help secure critical data and applications.	Up to 250 TS connections in Windows Server Standard, and unlimited with Enterprise Edition
System Center Virtual Machine Manager 2008	A unified, multi-vendor management solution for the virtualized IT environment that helps enable centralized administration of physical and virtual assets, increases server utilization, and provides dynamic resource optimization of virtual IT infrastructure.	Supports up to 400 physical virtualization hosts and up to 8,000 guest operating systems running on those hosts
System Center Essentials 2007	Designed for IT Professionals in midsize businesses, it provides a unified management solution that enables them to proactively manage their IT environments with increased efficiency.	Supports up to 500 client computers and 30 servers
